We Can Do Better!

The RTA was created by state law in 2012 to coordinate the region’s transit providers and to develop plans to address transit flaws and gaps, then raise funds to fix them.

Funding to implement the previous transit plan was narrowly defeated in 2016, by 49.5% to 50.5%.

The RTA and county leaders are evaluating this plan and exploring transit funding options for future voter consideration. Share your ideas, get updates, and get involved at DetroitTransit.org.

Southeast Michigan is Changing:

Fact: SE MI is aging. Many seniors outlive their ability to drive.

Fact: Millennials are the largest generation. Many can’t afford to or prefer not to drive.

Fact: Employers invest where employees want to live, which often are places where a car it not a requirement.

Our current transit has too many gaps and limits to help the region thrive through these changes:

- Green areas have enough people and jobs to warrant regular transit operations, but many areas lack any.

Our Region’s Transit Needs to Change to Keep Up.

The newly proposed Regional Transit Plan would:

- Connect to more places, with a Commuter Train, Commuter Express and Airport Express
- Run more frequently with 15 routes running every 15 minutes!
- Help every local community address their local needs with locally-directed Hometown Service
- Fund mobility pilot projects to help make SE MI the nation’s advanced mobility technology leaders

V.2.7
Transit Myths and Facts

Myth: Everyone around here drives.

Fact: One-third of our society can’t drive because they are:

⇒ Too old - Most people outlive their ability to drive by 8 years, then are stranded or dependent on others.
⇒ Too young - depending on parents to go anywhere
⇒ Physically unable - due to a disability, vision problems, epilepsy, or even just a broken foot
⇒ Financially unable - It costs more than $8,000 a year to own and operate a car; but under $800 to ride transit.

Many more don’t want to drive.

Only 60% of today’s 18-year-olds have a driver’s license, compared with 80% in the 1980s.

Technology matters more than cars to the 75% of millennials who prefer to live in a place where they do not need a car.

James Robertson became well-known as “The Walking Man” when our region’s transit gaps left him walking 21 miles a day to work.

Myth: Transit is anti-car and anti-business.

Fact: Auto companies support transit funding, as do many other leading business leaders (listed at bottom-left) who endorsed the 2016 regional transit ballot measure.

As Amazon’s HQ2 showed, young talented people demand transit, so do the companies that compete to hire them.

Employers need reliable employees who can keep working even if their car can’t.

What’s holding us back? Public Investment.

Similar-sized metropolitan areas have more and better public transit.

Why? Because they invest in their region’s transit, as this chart of per capita annual regional investment in public transit shows.

We get what we pay for.

Technology matters more than cars to the 75% of millennials who prefer to live in a place where they do not need a car.
